Marketing & Customer Intelligence Insights

Revenue Drivers, Retention Risks & Growth Opportunities

Analysis of 2,240+ customer records to identify key levers for revenue optimisation and customer strategy.

By Sharath

Executive Takeaway

Business performance is driven by **three structural forces**:

Revenue decline is caused by **falling customer base, not spending**

A small **high-value segment drives disproportionate revenue**

Marketing efficiency varies significantly by **channel and customer type**

Focus areas: **Retention, Segmentation, Channel optimisation**

Revenue & Retention Diagnosis

Revenue decline is directly correlated with **reduced active customers**

Average spend per customer remains stable

Churn rate: **38.4%**

Engagement drops sharply after **45 days**

Implication:
The business has a **retention problem, not a pricing problem**

Customer Value Concentration

Top 12.7% of customers generate 21.3% of revenue

Highest-value segment:

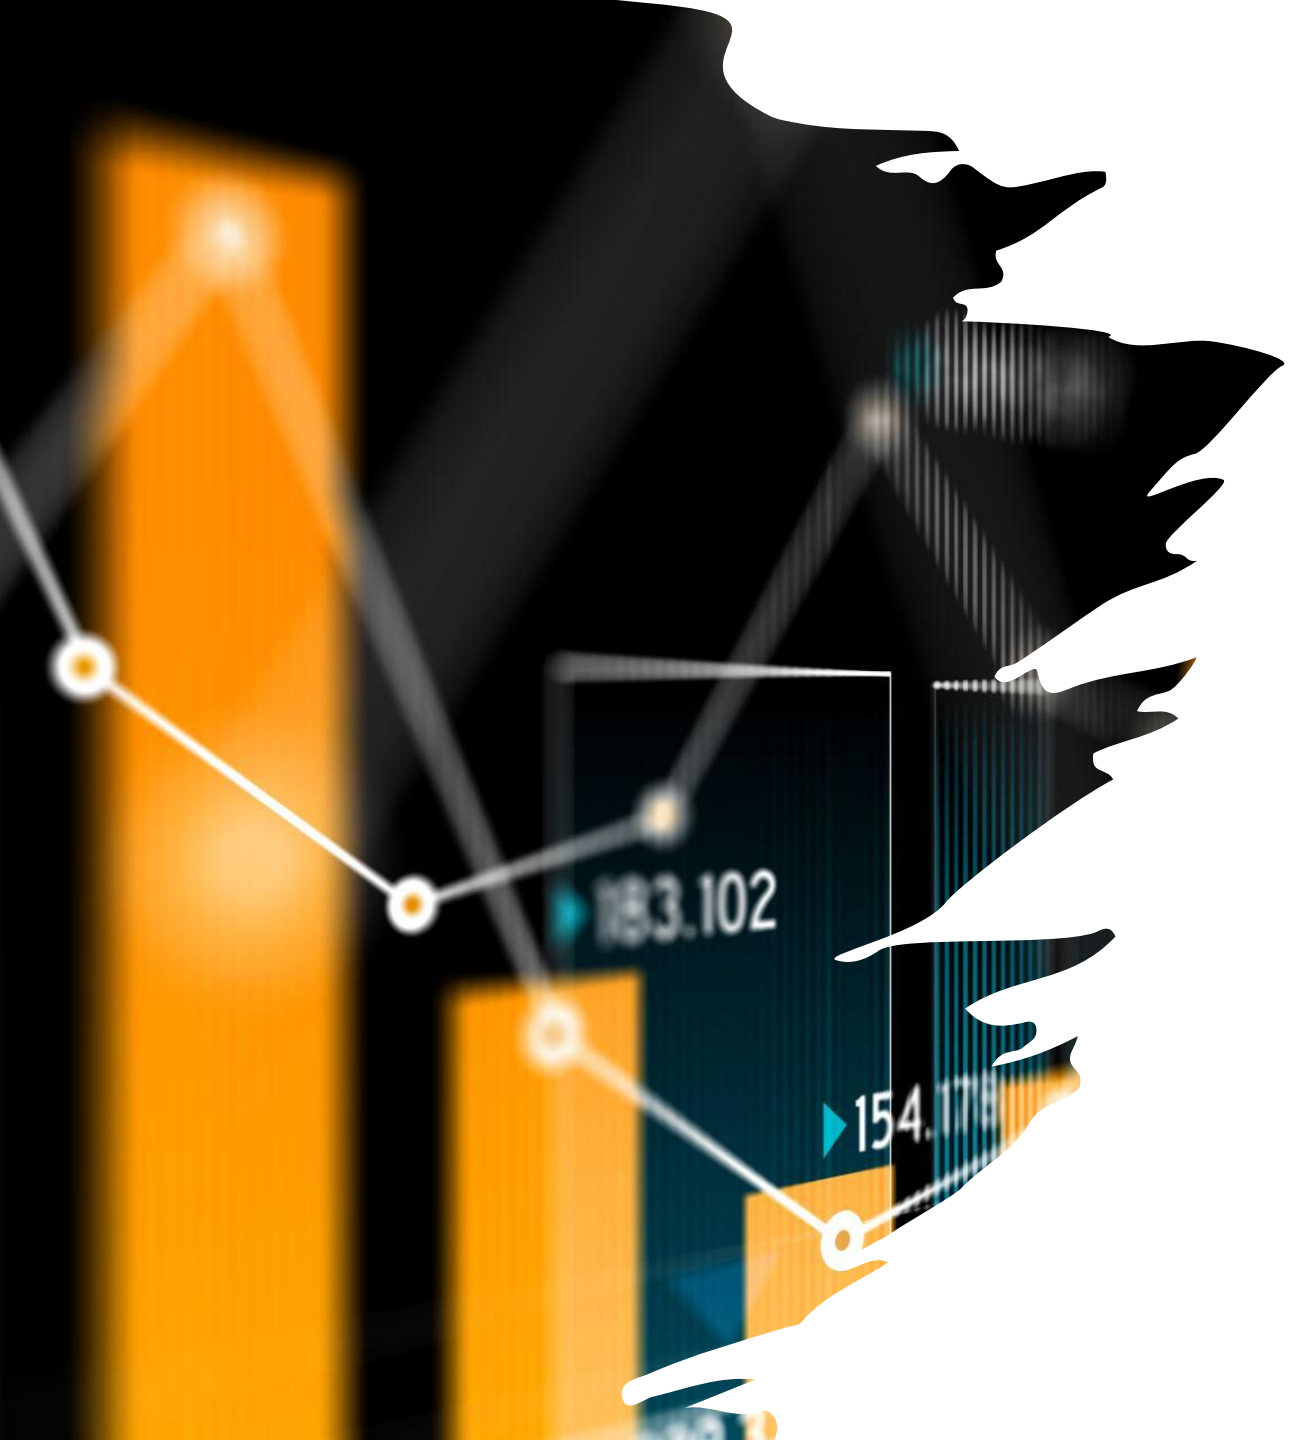
Postgraduate / PhD educated

Single households

High campaign responsiveness (~25%)

High average spend (> $600)

Implication:
Revenue is highly concentrated in a narrow, identifiable segment



Growth Levers (Marketing & Channel Efficiency)

- Instagram: highest revenue per customer (premium segment driver)
- Brochure: highest conversion rate (69%)
- Twitter: lowest ROI and underperforming
- Facebook: stable mid-tier performance
- **Implication:**
  Marketing efficiency is **highly uneven and misallocated**

Strategic Recommendations

- Three priority actions:
- Implement **45-day proactive retention trigger system**
- Reallocate budget toward **high-value channels (Instagram, Brochure)**
- Focus acquisition on **high-value customer profile (Postgraduate + Single)**
- **Expected impact:**
  Improved retention, higher ROI per channel, and increased revenue concentration efficiency

Thank you
